ALA - 2 : Python Installation Process: Interview Intensive

Question-Answer

1. What are the system requirements for installing PyCharm?

Answer:
PyCharm requires a system with:

- Minimum 4GB RAM (8GB recommended)
- 2.5GB free disk space
- Python installed separately

Syntax / Steps:

Check Python installation:
python --version

Example:

Python 3.11.5

2. How do you download and install PyCharm?

Answer:
You download it from the official website and run the installer.

Steps (Syntax-like):

1. Go to jetbrains.com/pycharm
2. Download Community/Professional version
3. Run .exe file
4. Click Next → Install → Finish

Example:
Install PyCharm Community Edition for free use.

3. What is the difference between Community and Professional Edition?

Answer:

- Community: Free, basic Python support
- Professional: Paid, includes web frameworks like Django

Syntax: *(Conceptual, not code)*

Community → Free → Python only
Professional → Paid → Web + Database + Frameworks

Example:
Use Professional for Django projects.

4. How do you set Python interpreter in PyCharm?

Answer:
Interpreter is required to run Python code.

Syntax / Steps:

File → Settings → Project → Python Interpreter → Add Interpreter

Example:

Select Python 3.11 installed in your system

5. How do you create a new project in PyCharm?

Answer:
A project is a workspace where your Python files are stored.

Syntax / Steps:

File → New Project → Choose Location → Create

Example:

Project name: MyFirstProject
Location: D:\PythonProjects

6. How do you create and run a Python file in PyCharm?

Answer:
You create a .py file and execute it.

Syntax:

```
print("Hello, PyCharm!")
```

Steps:

Right-click file → Run

Example Output:

```
Hello, PyCharm!
```

7. How do you install packages in PyCharm?

Answer:
You can install libraries using the built-in package manager.

Syntax / Steps:

File → Settings → Project → Python Interpreter → + → Search package → Install

OR using terminal:

pip install numpy

Example:

pip install pandas

8. How do you configure a virtual environment in PyCharm?

Answer:
Virtual environment isolates project dependencies.

Syntax / Steps:

New Project → Select "New Environment using Virtualenv"

OR manually:

python -m venv myenv

Example:

myenv created inside project folder

9. How do you update PyCharm?

Answer:
PyCharm provides automatic updates.

Syntax / Steps:

Help → Check for Updates → Download and Install

Example:
Update from version 2023 → 2024.

10. How do you uninstall PyCharm?

Answer:
Remove it from your system like any other software.

Syntax / Steps:

Control Panel → Programs → Uninstall → PyCharm

Example:
Select PyCharm → Click Uninstall.
